SUMMARY

Backend engineer building commercial systems since 2018, with depth in C#/.NET, Kafka and SQL Server. Owns production migrations from implementation through cutover and retirement of legacy systems, with experience improving reliability in grocery fulfillment and delivery. Combines hands-on distributed-systems engineering with technical mentoring. Holds an M.Sc. in Artificial Intelligence with published reinforcement-learning research.

CORE TECHNICAL SKILLS

- **Backend:** C#, .NET 6-10, ASP.NET Core, Entity Framework Core, LINQ
- **Architecture:** Domain-Driven Design, Clean Architecture, event-driven systems, microservices, modular monoliths, versioned REST APIs, transactional outbox
- **Data & messaging:** SQL Server, T-SQL, Apache Kafka, RabbitMQ, Redis, NetTopologySuite
- **Delivery & testing:** Docker, Kubernetes, GitLab CI/CD, Git, xUnit, Testcontainers, Moq, BDD (Gherkin/Reqnroll)
- **Observability:** Prometheus, Elastic APM, Serilog, Elasticsearch, production on-call

EXPERIENCE

Senior Software Engineer — Okala (Golrang Industrial Group)

Tehran, Iran · Oct 2024 - Present

Promoted from Software Engineer · Feb 2022 - Sep 2024

Online grocery platform handling 150K+ orders daily and over 300K during campaigns. Work spans fulfillment, logistics and delivery operations; achievements below cover both roles.

- Owned end-to-end replacement of two live platforms, first fulfillment and then delivery: built the replacements, migrated all operational flows and decommissioned both legacy systems.
- Migrated services from Windows Server to containers on Kubernetes; production incidents fell from near-daily to 1-2 per month.
- Built the delivery-operations platform with the team: four independently deployable .NET 10 services and around 200 versioned REST endpoints. Supported four concurrent store API versions with JWT authentication, role-based access and per-user rate limiting.
- Led a 40-topic Kafka event backbone with at-least-once delivery and per-entity ordering. Added retry with backoff, a persisted transactional outbox and Redis-based customer-notification deduplication across replicas.

Okala - continued

Selected engineering contributions across both roles

- Designed AutoRadius to replace manual store delivery-radius configuration with rules based on time, weather and order backlog. Repartitioned Kafka events by store to preserve ordering and avoid shared-table lock contention.
- Built delivery coverage and nearby-store search using SQL Server spatial types and NetTopologySuite, including exclusion polygons and distance-ranked results.
- Built integration tests using real SQL Server and Redis containers and two ASP.NET Core hosts over HTTP; parallelised execution in GitLab CI. Added Prometheus metrics and distributed tracing across all four services.
- Defined engineering standards and a spec-driven, AI-assisted development workflow. Mentor junior and mid-level engineers through code reviews, design reviews and technical unblocking.

Backend Engineer

Capital-markets software company · Tehran, Iran · Oct 2018 - Feb 2022

- Built C#/ASP.NET backend services for a stakeholder conferencing platform launched during COVID-19 to replace in-person capital-markets meetings, using RabbitMQ, SQL Server and Redis.
- Developed automated reporting and real-time dashboards for internal operations.

EDUCATION & RESEARCH

M.Sc. in Artificial Intelligence

Shahid Beheshti University · 2016 - 2019

Multi-Agent Systems (MAS) Lab — thesis research on transfer learning for reinforcement learning.

B.Sc. in Computer Engineering

Shahrood University of Technology · 2012 - 2016
